

NewPicasa

The project

The first project during the training formation of developing, the first project was to create an application to modify images value like author, the comments and the name of the files.

The biggest problem was to manage the file propriety when he put him to the application.

Nom

bgwallpaper.jpg

Tags (séparez par des ';')

BG; usefull

Commentaire

Image de background

Date prise de vue

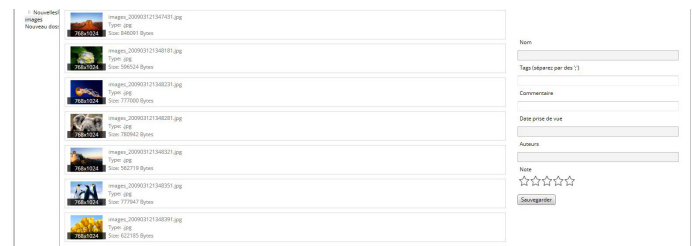

Result

The application is available on Windows 7 (x64) or higher.

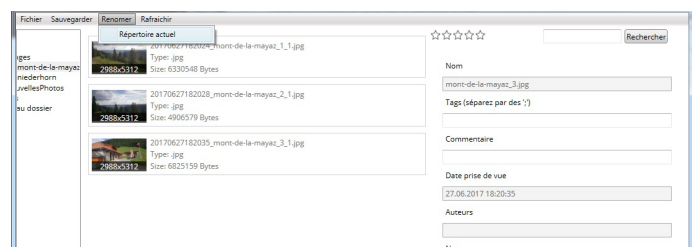

It find all your folders on «Pictures» and list them.

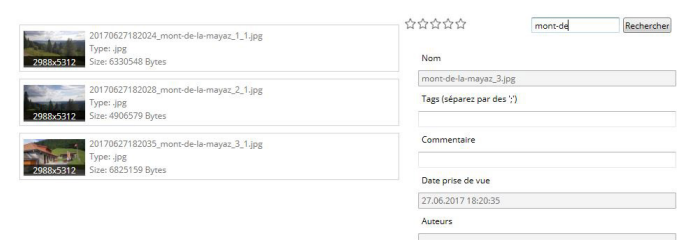

You can easily locate the wanted folder by this way and show the content on the main part.

If you want to rename an image, you can do it by pressing the «rename» button and it will rename the entire folder.

If you have a lot of images, you can also search your file with the searchform at the top of the application

Technologies & tools used

Technologies

The application was developed with C#/WPF and the library «WPF AnimatedGIF» by Thomas Levesque

Tools

To develop the application we used this tools :

- Visual Studio
- Microsoft Visual Studio 2017 Installer Projects
- GitHub
- MS Project
- Outlook
