Benjamin Delacombaz et Nicolas Henry
Technicien ES «Développement d'applications»
Project MAW 1.1

NewPicasa

The project

During the technicien formation of developping, the first project was to create an application to modify image value like author, comments and name of file.
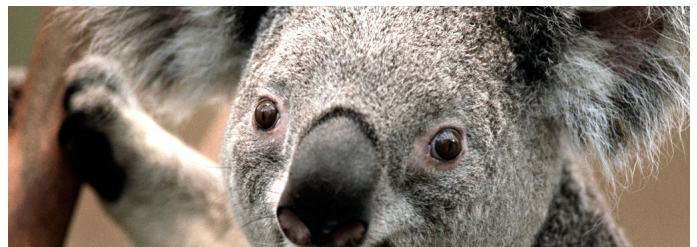

The biggest problem was to manage the file propriety when he put him to the application.

Technologies & tools used

Technologies

The application is developed with C#/WPF and the library «WPF AnimatedGIF» by Thomas Levesque

Tools

To develop the application we have used this tools :

• Visual Studio
• GitHub
• MS Project
• Outlook

Result

The application is available on Windows 7 (x64) and higher.

The application will find all your folder on «Pictures» and list them.

You can easy find the wanted folder by this way and show the content on the main part.

If you want rename an image, you can do it by press the «rename» button and select the file on your computer.

If you have a lot of image, you can also research your file with the searchform on the top of the application
